**A. Mission Description and Budget Item Justification**

The Basic Research for Countering Weapons of Mass Destruction (CWMD) project, as the nation's primary basic research portfolio dedicated to CWMD, is a core strategic investor in future scientific and technological progress across the Defense Threat Reduction Agency's (DTRA) mission areas. This project concentrates on high-risk, high-payoff basic research, leveraging world-class expertise in academia, government, and industry, to increase the foundational body of scientific knowledge supporting DTRA's Applied Research and Advanced Technology Development projects. Specifically, research projects support CWMD and include: accelerating the development of standoff radiological/nuclear detection capabilities; securing vulnerable materials; defeating WMD agents; strategic radiation hardened microelectronics; and leveraging science, technology, and innovation through domestic partnerships and agreements.

This project solicits, coordinates, and conducts research to build a robust, forward-looking fundamental research portfolio targeting strategic, mission-focused, basic research with high potential impact for CWMD. Research projects are selected for scientific merit, technical quality, and the potential for innovation. Each research project offers opportunities to expand the knowledge base to help the warfighter, to bring to bear new science solutions with a fresh approach, or to leverage revolutionary approaches to technical surprise, building a foundation for future CWMD solutions. This research will enable new capabilities to control, defeat, disable, and/or dispose of WMD threats.

**A. Mission Description and Budget Item Justification**

DTRA's Counter Weapons of Mass Destruction (WMD) Applied Research Program seeks to understand the means to deter and counter critical WMD problems. Through the program's four project areas, DTRA invests in the development of science and technology capabilities to counter WMD and emerging threats.

The CWMD Cross-Cutting Technical and Information Sciences project develops concepts and technologies in the areas of high-speed information processing, modeling and simulation, signal detection, and data-driven decision analysis in support of the DTRA's technical reachback teams.

The Nuclear Technologies and Capabilities Development project develops direct and indirect technologies for the detection of radiation and nonradioactive signatures associated with nuclear threats, and advance warfighter capabilities to rapidly locate, characterize, and counter such threats.

The CWMD Technologies and Capabilities Development project develops innovative kinetic and non-kinetic weapons technologies to expand traditional and asymmetric options available to Combatant Commanders to deny, disrupt, and defeat adversarial use of WMD while minimizing collateral effects.

The CWMD Test and Evaluation project provides unique national test bed capability for the study of weapon-target interaction, simulated WMD facility characterization, and WMD facility defeat testing to evaluate the implications of WMD and other special weapon use against U.S. military and civilian assets.

| The FY 2026 President's Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027. |                |                |                                                                                                                         |                    |                         |
